

Edited by Stuart Ellis and Kent MacCarter

History, issues and lessons from 10 notable fire, flood & emergency incidents throughout Australia and New Zealand

Incident Management in Australasia presents lessons learnt from managing major incidents at regional and state levels. It is not an academic work. Rather, it is a collection of stories from professionals on the ground and others who subsequently reviewed the events and gained significant knowledge and understanding through that process.

Some stories are personal, capturing emotional impact and deep reflection, and others analytical, synthesising the findings of experience and inquests. All the stories relate to managing operational events and capture knowledge that no one person could gain in a single career.

Forest Phoenix

How a Great Forest Recovers After Wildfire

David Lindenmayer, David Blair, Lachlan McBurney, Sam Banks

This book tells the story of ecological forest recovery in the wet forests of

Victoria following the major wildfires of February 2009. It also focuses on the science of ecological recovery – a major body of information that is not well known or understood by the vast majority of Australians and the vast majority of environmental policy makers. Forest Phoenix presents this important story via short engaging text and truly spectacular images, which are accompanied by highly informative captions.

Living with Fire

People, Nature and History in Steels Creek

Christine Hansen, Tom Griffiths

Within the Yarra River catchment area is the valley of Steels Creek, a small shallow basin in the lee of Kinglake

plateau and the Great Dividing Range. Late on 7 February 2009—Black Saturday—the Kinglake plateau saw a massive conflagration rip down the fringing ranges into the Steels Creek community. Ten people perished and 67 dwellings were razed in the firestorm. In Living with Fire, historians Tom Griffiths and Christine Hansen trace both the history of fire in the region and the human history of the Steels Creek valley in a series of essays which examine the relationship between people and place.

Flammable Australia

Fire Regimes, Biodiversity and Ecosystems in a Changing World

Ross A Bradstock, A Malcolm Gill, Richard J Williams (Eds)

Leading researchers in fire ecology and management discuss how fire regimes have shaped and will continue to shape the distribution and abundance of Australia's highly diverse plants and animals.

Contributions by 44 authors explore a

wide range of topics including classical themes such as pre-history and evolution, fire behaviour, fire regimes in key biomes, plant and animal life cycles, remote sensing and modelling of fire regimes. In addition, emerging issues are addressed such as climate change, carbon dynamics and opportunities for managing fire regimes for multiple benefits.

This brochure is printed on paper with fibres sourced from certified, responsibly managed forests.

International Journal of Wildland Fire

International Journal of Wildland Fire publishes new and significant articles

that advance basic and applied research concerning wildland fire. Articles aim to assist in the understanding of fire as a process, its ecological impact at the stand level and the landscape level, modelling fire and its effects, as well as presenting information on how to effectively and efficiently manage fire. The journal has an international perspective, as wildland fire plays a major role around the globe.
