

The Natural Selection

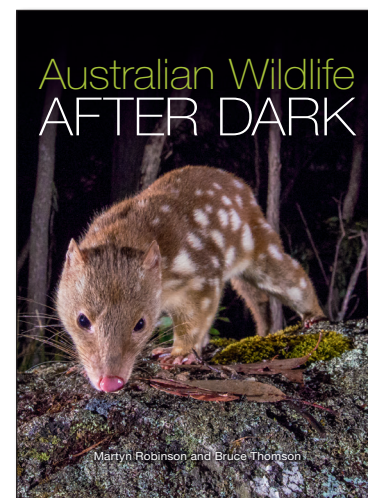

Australian Wildlife After Dark

Martyn Robinson, Bruce Thomson

A beautifully illustrated account of rarely seen night-time fauna in Australia.

Australia is a land of many unique animals, some of which are active only during the cooler evening and night-time and so are rarely seen. These are the after dark animals so widespread yet so little noticed by humans, whether in our backyards, the arid desert, woodlands or rainforest.

Australian Wildlife After Dark brings this hidden fauna into the light. The after dark fauna includes a surprising diversity of familiar (and some not-so-familiar) species, from cockroaches, moths and spiders through to bandicoots, bats and birds – and then some. Each example is described in a unique, friendly style by Martyn Robinson, familiar to many Australians through his frequent media appearances, and Bruce Thomson, an internationally renowned wildlife photographer and bat researcher. Also included are practical tips on finding nocturnal wildlife, a glossary of scientific terms and a short bibliography.

The Red Kangaroo in Central Australia

An Early Account by A. E. Newsome

Thomas Newsome, Alan Newsome

A unique insight into one of Australia's most iconic land mammals.

Almost nothing was known about the ecology of the red kangaroo when Alan Newsome began to study it in 1957. He discovered much about their behaviour and population by working in Central Australia. Most importantly, he realised the possibilities of enriching western science with Indigenous knowledge, a feat recognised today as one of the greatest achievements of his career. First drafted in 1975 and now revised and prepared for publication by his son, *The Red Kangaroo in Central Australia* captures Alan's thoughts as a young ecologist working in Central Australia in the 1950s and 1960s.

Miniature Lives

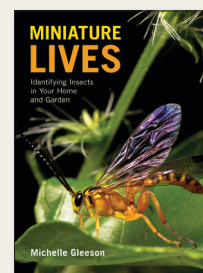

Identifying Insects in Your Home and Garden

Michelle Gleeson

A step-by-step guide to identifying insects, suitable for the whole family.

We can't avoid insects. They scurry past us in the kitchen, pop up in our gardens, or are presented to us in jars by inquisitive children. Despite encountering them on a daily basis, most people don't know an aphid from an antlion, and identifying an insect using field guides or internet searches can be daunting.

Miniature Lives provides a range of simple strategies to identify and learn more about insects. Simple explanations, amusing analogies and quirky facts describe where insects live, how they grow and protect themselves, and their status as friend or foe in a way that is both interesting and easy to understand.

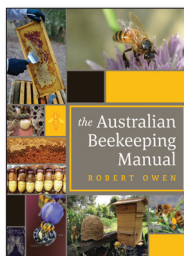

Australian Beekeeping Manual

Robert Owen

The book is aimed at both the novice and experienced beekeeper in Australia and explains the steps in detail required to manage colonies of bees. It includes much material not available in other international books, making this the ultimate beekeeping reference source written by and for Australians.

PLANTS & GARDENS

Plants of Central Queensland Identification and Uses of Native and Introduced Species

Eric Anderson

**An illustrated guide for identifying the
plants of this notable region.**

The Central Queensland region, which straddles the Tropic of Capricorn, is home to a variety of important and useful plant species. *Plants of Central Queensland* identifies 525 of these plants so that pastoralists and others can be better equipped to manage the vegetation resource of our grazing lands. The book highlights declared, poisonous, weed and medicinal plants, in addition to those useful for bees and bush tucker. The text is presented in an easy-to-read, non-botanical format, with helpful photographs and distribution maps.

LANDCARE

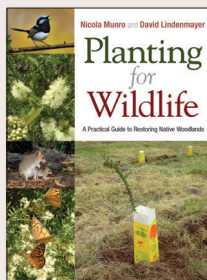

Planting for Wildlife

A Practical Guide to Restoring Native Woodlands

Nicola Munro, David Lindenmayer

A guide to restoring woodlands, with particular emphasis on plantings as habitat for wildlife.

Across Australia, woodlands are increasingly being planted on formerly cleared or semi-cleared land. Such revegetation efforts can improve biodiversity of farm wildlife, enhance aesthetics of the landscape and even boost farm production. *Planting for Wildlife* provides the latest information on restoring woodlands. Key topics include why it is important to revegetate, where to plant, how to prepare a site, how to maintain and manage plantings, and how they change over time.

From Déjà Vu to Why the Sky Is Blue, and Other Conundrums

CSIRO Publishing

A collection of *The Conversation's* expert articles answering the questions on everyone's mind.

Ever wondered how vaccines work, why whales strand themselves or if luck exists? *The Explainer: From Déjà Vu to Why the Sky Is Blue, and Other Conundrums* is a collection of the best articles published in 'The Explainer' and 'Monday's Medical Myths' sections of *The Conversation*. Expert authors combine facts, analysis, new ideas and enthusiasm to make often challenging topics highly readable in just a few short pages. This book is for the curious, those with a thirst for answers, and those with a fascination of how phenomena, new technologies and current issues in our daily lives work.
